Nuclear Logics examines why some states seek nuclear weapons while others renounce them. Looking closely at nine cases in Asia and the Middle East, Etel Solingen finds two distinct regional patterns. In East Asia, the norm since the late 1970s has been to forswear nuclear weapons, and North Korea, which makes no secret of its nuclear ambitions, is the outlier. In the Middle East the opposite is the case, with Iran, Iraq, Israel, and Libya suspected of pursuing nuclear-weapons capabilities, with Egypt as the anomaly in recent decades. Identifying the domestic conditions underlying these divergent paths, Solingen argues that there are clear differences between states whose leaders advocate integration in the

economy and those that reject it. Among the former are countries like South Korea, Taiwan, and Japan, whose leaders have had stronger incentives to avoid the political, economic, and other costs of acquiring nuclear weapons. The latter, in most cases in the Middle East, have had stronger incentives to exploit nuclear weapons as tools in nationalist wars geared to helping their leaders survive in power. Solingen complements her bold argument with other logics explaining nuclear behavior, including security dilemmas, international norms and institutions, and the role of democracy and authoritarianism. Her account charts the most important frontier in understanding nuclear proliferation: grasping the relationship between internal and external political survival. Nuclear Logics is a pioneering book that is certain to be an invaluable resource for researchers, teachers, and practitioners while reframing the policy debate surrounding nuclear nonproliferation. This book introduces readers to the history, meaning, traditions, and celebrations of the 100th anniversary of the School. Vivid photographs and easy-to-read text aid comprehension for early readers. It takes a craftsman's touch to shape the surfaces of the head for the optimal characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Most engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows you how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced porting procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the head down toward the valve seat, and developing the ideal port area and angle.
