**Shareholder Use and Understanding of Financial Information** Apr 21 2020 This book, first published in 1977 and reissued in 1990, examines one of the most familiar aspects of accountancy - that of company financial reporting. Assessing the view that shareholders have little time for financial reports, this book presents the findings from a research project analysing whether or not shareholders understand financial reports; what they do and don't understand; their use of financial reports; the type of shareholders who have the most, and least, understanding and who make most, and least, use of financial reports.

**Naked Finance** Mar 13 2022 For most managers, the normal round of hectic schedules, tricky staff issues and impending deadlines are well within their management capabilities. It is the financial issues that give them headaches. Nobody has ever explained how to balance sales against costs, how to interpret financial reports, how to prepare a budget or even how to argue the case for the new equipment their department needs so badly. They have no idea why the company's share price keeps falling and certainly don't understand why this should result in layoffs. In fact, the whole issue of finance is a mystery. Successful management of the finances of a business requires an understanding of some key principles - and that is what NAKED FINANCE is all about. It strips away all the technical issues surrounding financial management and lays bare the principles needed to make sound financial decisions. Firstly, Meckin shows how to identify financial objectives so you know where you are going - explaining the importance of profit and cashflow, how to measure financial performance and which are the key figures to watch. He then outlines how to use financial information to understand what's going on around you, covering the format and content of financial statements and how they can be used to assess past trading performance. Finally he describes how to ensure financial control and create a financial plan so you can take control of where you are going, managing costs, sales, profit and cash flow and long-term projects. Purely and simply, NAKED FINANCE provides the skills necessary to manage a profitable business.

The Global Findex Database 2017 Jul 05 2021 In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, *The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution* includes updated indicators on access to and use of formal and informal financial services. It has

additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at [www.worldbank.org/globalfindex](http://www.worldbank.org/globalfindex).

**Who Uses Financial Reports and for What Purpose? Evidence from Capital Providers** Jun 16 2022 We review the academic literature

on the use of financial reporting information by capital providers. We classify our findings by investor type and by information objective. While most capital providers use accounting information, our survey indicates that they do so in a variety of ways with financial reporting information competing with other sources of information. We also find that information intermediaries are influential in both credit and equity markets, making the identification of a typical target 'user' inherently difficult. Our main findings question the underlying objective of the Conceptual Framework to guide the development of standards for general-purpose financial statements to provide a typical knowledgeable investor with a true and fair view about the reporting entity. Finally, we identify gaps in the literature and suggest areas where future research can help inform important academic and policy debates.

Understanding the Use of Long-term Finance in Developing Economies Jan 31 2021

This short paper reviews recent literature on the use of long-term finance in developing economies (relative to advanced ones) to identify where long-term financing occurs, and what role different financial intermediaries and markets play in extending this type of financing. Although banks are the most important providers of credit, they do not seem to offer long-term financing. Capital markets have grown since the 1990s and can provide financing at fairly long terms. But few firms use these markets. Only some institutional investors provide funding at long-term maturities. Governments might help to expand long-term financing, although with limited policy tools.

of the Internet for savings and investment decisions grew much more rapidly than the use of financial planners for those decisions. A multivariate analysis of the use of financial planners showed that all other things being equal, use of the internet for savings and investment decisions had a negative effect on the likelihood of using a financial planner for savings and investment decisions. It is possible that increases in the client base for financial planners is limited by the growth of savings and investment resources on the Internet, although financial planners could adopt measures proposed for other professional services to deal with the competition in information resources.
